Infix to Postfix Pseudo code.

```
Infix to Post fix (exp)
{
    Create a Stack S
    for i=0 to length(exp) -1
    {
        if (exp[i] is operand )
            res = res + exp[i]
        else if (exp[i] is operator )
            while (is. empty() && Has Higher pre(S.top(),
            {                                        exp[i])
                res = res + S.top()
                S. pop()
            }

            S. push( exp[i] )
        else if  Is open parentheses (exp[i])
            S. push (exp[i])
        else if  Is closing parentheses (exp[i])
        {
            while (is empty () && IS open parentheses (s.top()
                { res = res + S.top()
                S. pop()
            }
            S. pop()
    }
}
```

```
while (is empty ())
{
        res = res + S. top()
           S. pop()
    }
return res.
}
```
